The prices are for strong plants in 5 or 6 inch pots, according to the growth of the variety, for delivery during April, May, and June. Three New American Hardy Climbing Roses

The New Dawn

Golden Climber

(Mrs. Arthur Curtiss James)

U. S. Plant Patent No. 28. The first true golden yellow climber with blooms of the choicest quality. The buds are true golden yellow with heavy markings of orange-scarlet showing between the sepals. These splashes gradually disappear and the semi-double blooms are a solid golden yellow with a heavy cushion of nankin yellow stamens in the center. They have a delightful fragrance and last a long time in water. The flowers are mostly solitary on stems 18 inches or longer. Though the blooms have all the wonderful qualities of the Hybrid-Tea type the plants are exceptionally hardy withstanding sub-zero freezing weather to an astonishing degree. **\$1.50 each; \$15.00 per doz.; \$120.00 per 100.**

Golden Climber

Hardy Perennial Plants

Specially Grown in Pots for Outdoor Planting

The majority of the stock offered is pot grown. This does not mean that the plants have been altogether pot grown but that they have been field grown, dug and potted up during the fall months. Such stock can be planted even late in the spring with practically no loss, whereas clumps seldom do well when planted late in the season. Our experience has been that a vigorous pot plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field clumps."

These new Giant-Flowered Yellow Day Lilies have been selected from the choicest varieties of recent introduction by American and European hybridizers. They are a great improvement on the older types and should be in every garden. The flowers are not only very large but pure in color. The difference in the blooming period of the varieties offered below provides a flowering season much longer than that of the older sorts. We highly recommend these.

Anna Betscher. Round, deep canary yellow flowers. Dwarf. Late.

George Yeld. Large open flowers. The outer petals are a rich orange, the inner ones flushed orange-bronze. Midseason.

J. A. Crawford. Exceptionally fine flowers of splendid size. A showy and brilliant combination of apricot and cadmium-yellow. Blooms very early.

The standards are of a rich deep violet-purple, a combination of colors not only rich but at the same time exceedingly soft and pleasing. The finest Japanese Iris grown.

The plants also are of a better, more uniform shape.

The plant attains a height of from 3 to 4 feet, forming a symmetrical, bushy shrub. Every branch is terminated by a graceful, cylindrical spike 6 to 9 inches long. The fragrant flowers are brilliant rosy violet-purple. In bloom from the latter part of July to late in September.

An exceedingly handsome new ornamental Shrub from the wilds of China, resembling the Weigela and Honeysuckle to which it is allied. Growing 6 to 8 feet high at maturity, with long arching branches, this variety combines all the merits of a perfect Shrub; hardiness, year-round beauty of foliage and habit, and an amazing profusion of pale-pink bell-shaped flowers in June. Firethorn or Evergreen Thorn

There is no other fruiting evergreen Shrub that is so attractive throughout the year as this fiery Thorn, and which will succeed in any fairly sunny position, developing into a shapely plant 6 or more feet high; it may be planted either in connection with other Shrubs or as a single specimen or may be trained with wonderful effect against a wall. Its large trusses of white flowers are followed in summer by an abundance of brilliant orange-scarlet berries, which, remaining on the plants throughout the winter produce a gorgeous effect. Strong pot-grown plants 15 inches high, 75c each.

Viburnum Carlesi

A rare Korean variety which is entirely distinct with salver-shaped flowers of a delicate rose tinted white, passing to white sweet-scented flowers produced in terminal subglobose cymes 2 to 3 inches in diameter, reminding one somewhat of a spray of *Bouvardia*. Good bushy specimens 2 to 2½ feet high, \$1.25 each.

Vitex macrophylla

In general habit similar to *V. Agnus-castus*, but much stronger in all parts, the foliage being larger while the trusses of rich lavender-blue flowers are fully double the size. It blooms from July until frost, and is likely to become as popular as the Butterfly Shrub.

Dreer's Select Dahlias

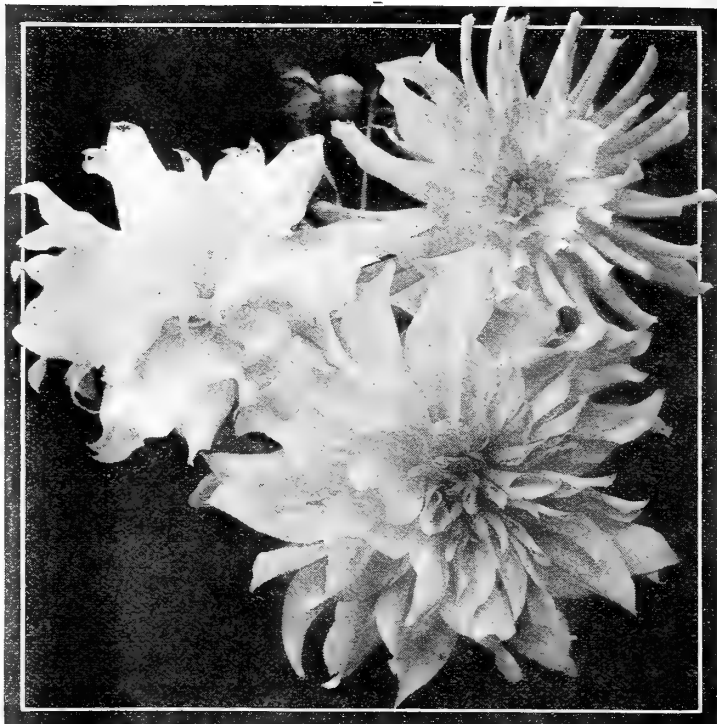

One of Our Leading Specialties

We wish to call your special attention to the seven new Dahlias offered on this page because we know that they are outstanding in every respect. The three exhibition novelties are bound to appeal to the flower lover to whom size is an essential factor.

In Nesthaekchen we have a Miniature Dahlia of outstanding merit. While we do not believe that the Giant Flowered Dahlias are doomed as favorites we also know that the Miniature Dahlias will be grown most extensively in years to come. They have a charm of their own. Besides their value in the garden, where they form compact plants covered with blooms, the gracefully formed flowers are admirable for bouquets and many types of decoration. From the large list of the new Miniature Dahlias we have picked Nesthaekchen as having a particularly charming appeal.

The prices quoted for the seven novelties given on this page are for green plants, ready May 10, and we do not supply roots or divisions of these.

All other varieties (offered on pages 32-34 incl.) will be supplied in dormant field-grown roots or in strong division of such roots of proper planting size (not clumps).

Primulinus Hybrid Gladiolus

These are most attractive, easy to grow, and sure to bloom. They lend themselves particularly well to interesting decorative effects and soft color harmonies.

In hot, dry locations, where other varieties would burn out, they will still give a wealth of flowers, but naturally they respond, like all Gladiolus, to high cultivation and favoring environment. The color range runs from primrose to rich orange, apricot, and crimson, but there will be shades of pink and rose as well, together with rare coppery hues. We offer a mixture of named varieties, grown separately, and blended to give a proper color balance. 30 cts. per doz.; \$1.75 per 100; \$15.00 per 1000.

Dreer's Gold Medal Gladiolus

Our Gold Medal Blends are made up entirely of named sorts, grown separately, and blended according to a carefully considered formula, so that there may be a proper balance of the various colorings and shadings. We know from experience that it is practically impossible to grow Gladiolus in mixture and have them give satisfaction to our customers. Such mixtures soon become loaded with less desirable but rapidly propagating sorts and the whole color scheme is thereby thrown out of balance.

In our blends we use only the finest named kinds and no variety enters into them that is not large flowering and of attractive color. Good texture, strong spike and artistic placement of the blooms are requirements of the greatest importance. All are sorts that are well worth growing individually.

Section One. The range of coloring extends from rich rose through old rose, rose ash, orange scarlet, and bright red, to deep crimson and velvety maroon. 35 cts. per doz.; \$2.25 per 100; \$18.00 per 1000.

Section Two. From palest blush to warm deep pink and soft rose, from cream and primrose to citron yellow and salmon-orange, together with snowy and tinted whites and other sorts splashed or stained with deeper blending shades. The colorings of our Gold Medal Section 2 Blend always carry a strong appeal. 35 cts. per doz.; \$2.25 per 100; \$18.00 per 1000.

Section Three. Pale lavender, deep blue, lilac, heliotrope, amaranth, and velvety royal purple,—all of the rich "Pansy" shades have been garnered for this blend. 50 cts. per doz.; \$3.00 per 100; \$28.00 per 1000.

All Sections Mixed. An actual mixing in due proportion of bulbs from the three numbered blends. If you want all of the possible worthwhile Gladiolus colorings, you should find them here. 35 cts. per doz.; \$2.25 per 100; \$18.00 per 1000.

Dormant bulbs planted in the border early in May will flower in about 3 or 4 weeks after planting. Besides their value for garden growing they also are very splendid for flowering in pots in the house during the early spring months. The plants grow about a foot tall and they have showy, linear foliage. The flowers are bright crimson. They are tubular and measure 4 inches in length. Their culture does not differ from that of the Amaryllis and they require a resting period between seasons in order to bloom successfully. \$3.00 per doz.; \$22.50 per 100.

Dreer's Improved Strains of VEGETABLE SEEDS

56

There are many florists who take advantage of the opportunity to supply the demand from amateur gardeners for strong, young plants of various kinds of vegetables. Furthermore there is a good profit in raising early vegetables to perfection under glass. The most important factor toward making this side line profitable with the florist is good seed. Dreer's Vegetable Seeds are as choice as Dreer's Flower Seeds. They represent the result of careful plant breeding and most exacting selection which is the only means of securing a uniform strain of true-to-name stock. Many florists will find throughout the season some idle bench space that can be turned into ready money by filling in with vegetables.

Through the proper applications of fertilizers, bone meal, **Bovung**, sheep manure, etc., beautiful lawns are to be obtained. This Planet Jr. Fertilizer Distributor does the work in an easy, practical manner. An adjustable feed allows for little or liberal application. The Distributor is 14 inches wide and holds from 25 to 30 pounds of fertilizer. \$5.50.

Planet Jr. No. 210 Fertilizer Distributor

Additional fertilizing equipment is available and descriptive information will be sent upon request.

BOVUNG

An Organic Fertilizer

Bovung is simply cow manure that has had practically all of the moisture taken from it immediately after being removed from the barns.

Bovung will be the proper fertilizer to use wherever feeding is contemplated. We have experimented with it at our Riverton Nurseries upon pot grown plants and upon field grown stock as well, with such satisfactory results that we are offering **Bovung** as a better fertilizer than any similar product.

As a fertilizer for grasses, **Bovung** is ideal and while a little goes far no harm will occur through liberal applications.

Bovung is in excellent mechanical condition, being light and dry, and so well pulverized that it may be used in fertilizer spreaders just as easily as any chemical fertilizer. A 50 pound bag contains more than two bushels of manure.

No. 4 Combined Hill and Drill Seeder and Single Wheel Hoe is a combination of the most useful tools for a moderate sized garden. Plants almost all vegetable seed in continuous rows or in hills 4, 6, 8, 12 or 24 inches apart. A plow adjustable for depth opens a straight narrow furrow, the seeds are dropped in it, are covered and the soil firmed and the next row marked out all in the same operation. Converted into a Single Wheel Hoe by changing one bolt. Cultivating equipment includes all the essential equipment for hoeing, weeding, cultivating, plowing, furrowing, ridging, etc. The tools are oil hardened and tempered and will wear almost indefinitely.
